# CATALOGO CATALOGUE

# **CATALOGO** ***CATALOGUE***

## **L'azienda** **About the company**

La nostra società nasce nel 1965 come officina meccanica specializzata nella produzione diretta di componenti per macchine da caffè espresso: l'attività si è poi sempre più sviluppata distinguendosi per l'ampliamento della gamma dei prodotti, la specializzazione delle linee, l'adeguamento alle nuove tecnologie di produzione e la completezza dell'offerta commerciale. La nostra clientela, composta da costruttori di macchine da caffè, ricambisti, tecnici e torrefattori, si è con gli anni sempre più consolidata ed ampliata, mostrando una costante crescita, in particolare verso l'estero. La produzione diretta di componenti a prezzi competitivi rimane il nostro punto di forza, insieme ad un vasto magazzino di oltre 20.000 articoli sempre in espansione: attualmente disponiamo di una completa gamma di ricambi per macchine da caffè, come anche per macinadosatori, lavatazze, addolcitori e catering, con puntuali spedizioni giornaliere nazionali ed internazionali. Il nostro catalogo online è diventato negli anni un punto di riferimento fondamentale per i nostri clienti: abbiamo sviluppato un sistema di vendita online accessibile e rapido tramite cui vengono effettuati oltre l'90% degli ordini. Produrre significa acquisire una profonda conoscenza dell'intero processo di lavorazione: dal disegno, alla realizzazione, alla vendita e supporto tecnico. Forti di 55 anni di esperienza, siamo per i nostri clienti un partner irrinunciabile grazie alla nostra familiarità con il prodotto e le sue applicazioni, l'attività di ricerca, innovazione, servizio e assistenza.

*Produciamo componenti, costruiamo soluzioni.*

*Our Company was born in 1965 as a mechanical workshop specialized in the direct production of espresso coffee machine components: our business has developed through the years distinguishing itself for the variety of products, the specialization of our lines, the adaptation to modern technologies and completeness of the offer. Our customers have constantly grown in number and they include coffee machine builders, coffee roasters, spare parts dealers and engineers – our business has also spread abroad and nowadays the foreign trades have become half of our turnover. Direct manufacturing of parts, competitive prices and a well stocked warehouse with over 20.000 pieces are the main features of our Company. We keep widening our products offer, dealing nowadays with spare parts for coffee machines, coffee grinders, dishwashers, water softeners and catering with daily shipping, both national and international. Our online catalogue has become through the years a point of reference for our customers: we have developed an accessible and fast system that collects today over 90% of our orders.*

*Direct production of parts means gaining a profound knowledge of the entire manufacturing process: from design, to production, to sales, customer care and technical assistance. Our 55 years of experience have translated into a deep familiarity with the product and its applications, research, innovation and focus on the client – a guarantee of quality and expertise that make us an invaluable partner to our customers.*

*We manufacture parts, we build solutions.*

# techUp<sup>TM</sup> by dvg

L'Espresso Made in Italy solo con TechUp

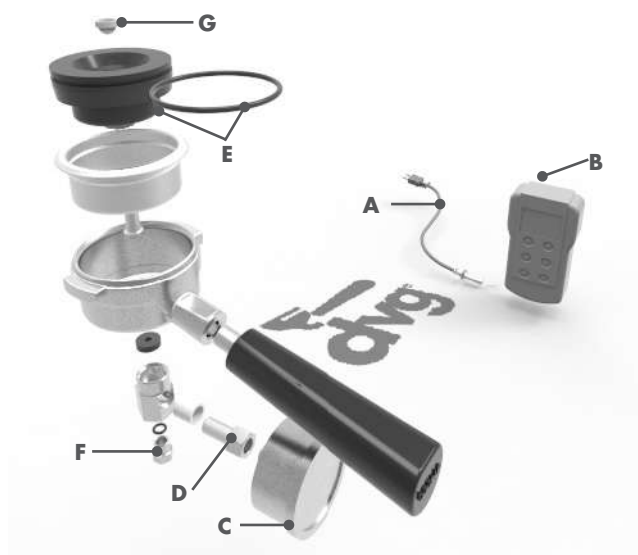

## CONTENUTO DEL PRODOTTO

TechUp™ si presenta come un normale portafiltro per macchina da caffè ma racchiude al suo interno degli aspetti tecnici e funzionali frutto dello studio e della nostra esperienza di oltre 50 anni nel mondo delle macchine da caffè professionali.

TechUp™ è dotato di:

- A** - termocoppia tipo T con terminale da 1 mm e velocità di risposta 0,15"
- B** - termometro digitale a 2 ingressi con risoluzione 0,1°C (solo nel kit completo)
- C** - manometro di precisione 0-25bar immerso in glicerina
- D** - raccordo mobile smontaggio/montaggio manometro
- E** - adattatore sagomato in tecnopolimero con o-ring di tenuta
- F** - gicleur con foro calibrato a 0,3mm
- G** - filtri meccanici

Il kit completo viene fornito in una pratica valigetta contenente inoltre un bicchiere graduato, un prodotto per la pulizia del gruppo con filtro cieco e spazzolino, una chiave per lo smontaggio del manometro e del gicleur, del teflon liquido.

## MODALITÀ OPERATIVA

### Preparazione

Prima di procedere all'utilizzo di TechUp™ assicurarsi che il gruppo erogatore della macchina da caffè sia perfettamente pulito e non siano presenti residui di polvere di caffè. È necessario effettuare un ciclo completo di lavaggio con prodotto detergente idoneo (in caso di necessità sostituire la doccetta). Al termine della procedura di lavaggio, attendere 10' in stand-by per permettere il ripristino termico della macchina.

### Sequenza operativa completa

- 1** - Effettuare un'erogazione "flash" di 2" sul gruppo erogatore
- 2** - Agganciare TechUp™ sul gruppo erogatore (accertarsi che il termometro digitale sia acceso e posizionato sul canale corretto, e la sonda collegata correttamente)
- 3** - Eseguire 3 cicli di 30" l'uno intervallati da 30" di pausa, effettuando l'erogazione "flash" prima di ogni ciclo (tale procedura consente di portare in temperatura il corpo dello strumento per evitare che la temperatura di quest'ultimo influisca sui dati che verranno rilevati)
- 4** - Verificare, al termine dei 30" di erogazione, che siano stati erogati circa 60ml +/-5% di acqua (utilizzare il bicchiere graduato in dotazione. In alternativa verificare con una bilancina l'erogazione di 60gr +/-5% di acqua)
- 5** - A partire dal 4° ciclo sino al 6°, eseguiti sempre con la medesima modalità (30"ON/30"OFF), rilevare le temperature (per ogni ciclo rilevare 3 temperature: a 15", a 20" e a 25")
- 6** - Otteniamo così 9 rilevazioni di temperatura, dalle quali poi effettuare una media matematica  

$$T_{\text{finale}} = (T1+T2+T3+T4+T5+T6+T7+T8+T9) / 9$$
- 7** - Il valore risultante dovrà essere compreso tra i 90°C e i 96°C (range di temperatura idoneo all'erogazione del caffè espresso Made in Italy)

### Sequenza operativa ridotta

- 1** - Ripetere la procedura completa fino al punto 4
- 2** - A partire dal 4° ciclo rilevare la temperatura dopo 15"/20" di erogazione (temperatura stabilizzata)
- 3** - Il valore risultante dovrà essere compreso tra i 90°C e i 96°C (range di temperatura idoneo all'erogazione del caffè espresso Made in Italy)

## MANUTENZIONE

TechUp™ è stato concepito in modo tale da poter essere smontato (in alcune delle sue parti) per consentirne la sostituzione e/o la pulizia. Per la pulizia del gicleur (F) utilizzare aria compressa. È consigliato soffiare lo stesso al termine di ogni utilizzo per evitare la formazione di calcare. Non utilizzare punte metalliche che potrebbero alterare le dimensioni del foro calibrato.

Evitare che il manometro (C) subisca urti che potrebbero pregiudicarne la taratura. Una volta smontato aggiungere del teflon liquido per garantire la tenuta del raccordo (D).

Rimuovere il filtro inox (G) nel caso in cui sia otturato da impurità. Lavarlo con acqua corrente fredda. Prestare attenzione al terminale della sonda (A) durante lo smontaggio del filtro inox. Evitare pieghe eccessive che comprometterebbero l'integrità della sonda stessa. L'adattatore in tecnopolimero (E) è dotato di o-ring di tenuta che ne consente facilmente lo smontaggio (non necessario ai fini della pulizia).

Per altre info e per maggiori dettagli visita il sito [www.dvg.coffee](http://www.dvg.coffee)

## DESCRIPTION OF THE PRODUCT

TechUp™ seems to be a standard portafilter for coffee while inside there are technical and functional features coming from more than 50 years of our experience inside the professional coffee machines world.

TechUp™ is made of:

- A** - T thermocouple with 1mm sensor and response time of 0,15"
- B** - digital thermometer with 2 input channel and resolution of 0,1°C (only with complete kit)
- C** - precision manometer 0-25bar/0-360psi full of glycerine
- D** - joint for mount/dismount the manometer
- E** - technopolymer adaptor with sealing o-ring
- F** - 0,3mm hole gicleur
- G** - mechanical filters

Complete kit is distributed in a practical box contained a graduated beaker, a cleaning product for grouphead, a blind filter and a nylon brush, a wrench for mount/dismount the manometer and the gicleur, PTFE liquid.

## OPERATIVE MODE

### Pre-setting

Before start to use TechUp™ you must be sure that your coffee machine group head is perfectly clean, without any trace of coffee powder. It is necessary to carry out a complete washing cycle with a suitable detergent product (in case of need replace the shower). At the end of the washing procedure, wait 10 minute in stand-by to allow the thermal recovery of the machine.

### Complete operating procedure

- 1 - Make a "flash" erogation of 2 seconds on the brewing group
- 2 - Hook TechUp™ onto the brewing group (make sure the digital thermometer is powered on and positioned on the correct channel, and the probe connected correctly)
- 3 - Execute 3 cycles of 30 seconds each one with a 30 seconds interval of pause, performing the "flash" delivery before each cycle (this procedure allows the body of the instrument to be warmed up to avoid that the temperature of the instrument influences the data that will be detected)
- 4 - Verify, at the end of the 30 seconds of erogation, that about 60ml +/- 5% of water have been dispensed (use the graduated beaker supplied. Alternatively, check with a coffee scale the erogation of 60g +/- 5% of water)
- 5 - Starting from the 4th cycle up to the 6th, always performed with the same mode (30 "ON / 30" OFF), detect the temperatures (for each cycle detect 3 temperatures: at 15", at 20" and at 25")
- 6 - We obtain 9 temperature measurements, from which we then perform a mathematical average  

$$T_{final} = (T1+T2+T3+T4+T5+T6+T7+T8+T9) / 9$$
- 7 - The resulting value must be between 90°C and 96°C (temperature range suitable for the erogation of Made in Italy espresso coffee)

### Simple operating procedure

- 1 - Repeat the complete procedure until point 4
- 2 - Starting from the 4th cycle, measure the temperature after 15/20 seconds of erogation (stabilized temperature)
- 3 - The resulting value must be between 90°C and 96°C (temperature range suitable for the erogation of Made in Italy espresso coffee)

## MAINTENANCE

TechUp™ has been designed in such a way that it can be disassembled (in some of its parts) to allow for its replacement and / or cleaning. Use compressed air to clean the gicleur (F). It is recommended to blow the same at the end of each use to avoid limescale formation. Do not use metal tips that could alter the size of the calibrated hole.

Do not allow the pressure gauge (C) to suffer shocks that could compromise the calibration. Once dismantled add liquid PTFE to ensure the seal of the fitting (D).

Remove the stainless steel filter (G) in case it is clogged with impurities. Wash it with cold running water. Pay attention to the probe terminal (A) when removing the stainless steel filter. Avoid excessive bends that would compromise the integrity of the probe itself. The technopolymer adaptor (E) is equipped with a sealing o-ring which allows easy disassembly (not necessary for cleaning).
